Nov. 11, 1957: San Fernando, California

4:20 pm. Four engineers for Rocketdyne, observed three UFOs flying in formation in bright daylight. The group was driving in a generally ESE direction from the Rocketdyne SanSu facility toward Canoga Park, with the late afternoon sun to their back. One of the men happened to look up and saw three shiny objects crossing their path, from NE to SW. He alerted the others, and they all clearly saw a large narrow oval object (almost cigar- shaped) accompanied by two smaller nearly circular objects (slightly oval, as if discs viewed at an angle). The large UFO was silvery on top, but bright orange underneath, possibly reflecting sunlight. The two smaller UFOs were solid silver colored. Keeping the same positions relative to each other, a V with one of the smaller objects slightly ahead and one slightly behind the large object, the three UFOs accelerated and climbed away into the distance. The four men compared notes, and arrived at a consensus of opinion that the UFOs were first seen at about 10,000 feet altitude, climbing to 30,000 feet, at an estimated 5000 mph. (One of the engineers, Harold R. Lamb, Jr., filled out a NICAP report form.)
