MADAR 101

UAP SIGHTINGS

What To Do

by fran ridge

20200901, updated 20241229

Based on lessons learned, there are three actions if you have a sighting during a MADAR event or learn of a sighting in your neighborhood or region.

- A. Get outside and observe.
- B. Take notes.
- C. File a report.

Not everyone joined the MADAR Project to take advantage of the Early Warning System. Some volunteered as operators of a robot station (Mode Level I). Thirty percent of the nodes operate at Level II and have a DAS (Detection Alarm System or alarm speaker) and a trained team with a prescribed load list of equipment. If a sighting occurs in conjunction with an alert, the op has several choices.

Detailed descriptions:

A. GET OUTSIDE AND LOOK!

If you are able to do this, once the alert sounds, go out and look! Grab a piece of equipment, the best you have, and go. Someone may see a UAP in your area, but without a report your MADAR anomaly is an "uncorrelated target".

2. TAKE A FEW NOTES!

If you have a sighting, or you get a report of a sighting in your area, or even out of your area if it is of a significant nature,

- a) Immediately fill out an

an FI-4E (Electronics version) which is a short form/preliminary form [FI-4E \(Electronics version\)](#). Getting this basic data down while it is fresh is crucial. Let us know about it ASAP.

b) This is just a suggestion, but print a few [MADAR Questionnaire sighting report forms](#)

After a sighting quickly fill this out and set it aside. This could be very important and could provide data later when you need it.

c) If and when you DO file a report, contact your state MUFON group and they will assign a field investigator.

3. CHECKING FOR SIGHTINGS

Later on when the dust settles (give the sources time to get the data online) go to the MUFON CMS or NUFORC to see if anyone filed a report near you. Or, if you have a state director or "ufo officer", have him/her check the databases. If you have an anomaly you can also contact me or the MATCH UFO Officer:

ONLINE SIGHTING SEARCH

We have an online MADAR Alert Search. If you have a good sighting that you have discovered while searching MUFON CMS, NUFORC, or any other credible source, send us a brief description. We will need the correct date and time, and the state. The MAS will pull up any anomalies from any of the nodes in that state so that we can do further research. We will be looking for "hits" as well as field (E-M) numbers just short of trigger. The easiest and best way is to search THREE days: the day, the day before and the day after. But you must convert local time to CUT as all the data in our database is filed in Universal Time Code. Or let us do it.

So, very important, if you have an alert, get out and look and take notes. It can make a big difference. It did at Millerton, Pennsylvania on April 23, 2020 and Fishers, Indiana on September 28, 2019 .

PRESCRIBED LOAD LIST (Each Op or team may have his own list of available or desired

equipment) can be found at [01-00-Kit PLL](#) which can include

Cell phone

Camera

Video camera

Binoculars

Note pad, pens

Polaroid sunglasses (for daylight use in observing possible [see paper on] Faraday rings).
