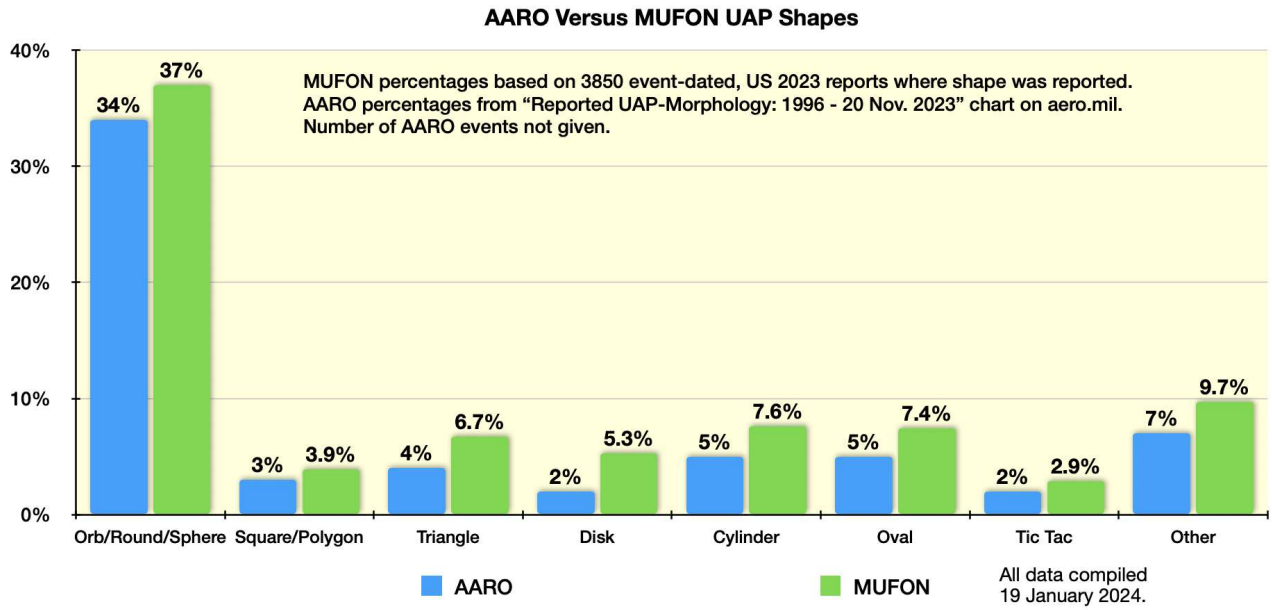
UAP SHAPE CATEGORIES

By Rob Swiatek



This is a graph prepared earlier this year that contrasts numbers of incoming MUFON cases in certain shape categories with the same shapes listed in a pie chart on the aaro.mil website. However, the AARO cases are a different subset of cases, by and large, from those of MUFON, with almost 77% of the cases of the former occurring at 15,000 feet or more above the ground. A few of MUFON's cases occur above 15,000 feet, but not 77%. Yet despite the altitude differences, the shape consistencies are striking. The MUFON numbers represent incoming cases (i.e., pre-investigation); the same is true of the AARO reports, I believe.
