I – NUFORC REPORT

February 23, 2025; Edmond, Oklahoma
5:40 AM. Witness took her daughter to work that morning at a local coffee shop off of Pennsylvania—a street that opens early—something she does about once a month. She said her smartphone was connected to her vehicle's Bluetooth, and she took video while driving and then again while parked nearby. She said there were stars, and the stars seemed brighter and more colorful lately for some reason. She thought this object was a star until it started moving. It made no sounds at all. She did not think it was a plane or helicopter and really doesn't think it was a drone, but she cannot guarantee that. She did look on Flight Radar24 to see if it could be a plane, and none were listed. She took about 1 minute and 35 seconds of video but started to feel afraid, as if the object was evaluating or watching her. She said she knew that could sound crazy or paranoid, but it was how she felt, so she stopped because she felt afraid.

The individual was very direct, gave accurate information, and didn't hesitate to state what happened.

Flight Radar24 doesn't display all aircraft and certainly not all military or drones.

II - MADAR DATA

MADAR site 242 is at Oklahoma City, 15 miles south of the sighting location. Mike Six is the operator. He didn't have a code blue because his threshold was set at 70, which for MADAR is too high. But it didn't make any difference because the magnetometer spike was 12.38 milligaus. The conversion from 5:40 AM to UTC was 11:40, and 3 mins later is when the site had the spike. Two minutes later there was an identicle spike at 11:45 UTC. Apparently something entered regional airspace, stuch around for two minutes, and then left. MSV confirmed this with a 9 degree compass deviation. Site 242 did not have a geiger counter onsite at the time so it missed out on potential MSV there.

III - INVESTIGATION SEQUENCE GUIDE

03/16/2025 – sighting occurred
04/03/2025 - MOC ran spreadsheet
04/03/2025 – CIR filed with NUFORC, approved same day
03/17/2025 - Received report at MOC with attachments
04/03/2025 – mike six notified
04/07/2025 – linda thompson assigned
04/17/2025 - Also filed an FI-4 through NUFORC

IV – COMMENTS

02/23/2025 – occurred 187926
02/24/2025 – NUFORC cmpt form
04/07/2025 – interrogation by linda thompson
04/08/2025 – spreadsheet
04/08/2025 – contacted dave thall for image analysis
