July 2nd, 2018; the Millerton, Pennsylvania
05:36 am. MADAR Node 104 detected an anomaly. Upon checking reliable sources, it was discovered that on July 2, 2018, a witness at Bethlehem, Pennsylvania had reported a UFO incident to the Mutual UFO Network which had occurred at 02:40 local time. The Case Management System stated that the female witness was leaving her boyfriend's house late at night to return to her home and was reaching the top of a hill and suddenly observed a strange object further down the road. Almost in the middle of the road was huge object or vehicle observed on the road, essentially taking it all up. She had thought at first that maybe it was some late night street cleaning or construction vehicle. When she got closer she then thought maybe it was a tank, and got scared, wondering why a tank was in her city. Then getting even closer she recognized the shape, and it didn't have any visible wheels. It was motionless the whole time she was driving towards it. When she finally got close enough to make it out to be a ufo she freaked out and had a panic attack. Taking up what seemed like three lanes, it was gray and dull metal, not shiny. She didn't see any windows on it from the angle she was observing from. As soon as she made out what it was she freaked out, quickly leaving the area and turning away from it. ("I couldn't have drove past it anyway as it was blocking the whole street.") She called her boyfriend several times, body shaking and driving reckless and when she finally got ahold of him she was crying and frantically trying to explain what she had just seen. She was too scared to continue going home so she ended up just going back to his house and continuing explaining what she saw and then took him to the spot within 5 minutes of leaving and it was completely gone, the giant thing just disappeared. When she observed the object there was no one anywhere else in sight. (C.M.S. Case number - 93046) [Note the characteristic CE time in "wee hours". Witness filed online report but never responded to investigators for an onsite investigation or filled out any questionnaire. Listed as Insufficient Data but I feel that the witness was afraid to do anything further and should still be contacted if at all possible. (MUFON CMS)
