7:30 pm. Witness report: Well here it is my crazy little story. on my way to work one morning 3/23/20 traveling up i-91 and getting off the interstate at exit 14 where it crossed route 113. when i went up the ramp i saw a red light at the top of my windshield so i turned around quickly thinking someone was on the wrong side of the road and it was someone backing up the ramp. then at the top of the ramp looking through my windshield i saw it, a circular disc traveling over the road slowly in front of me. traveling at a joggers pace about 20-30 ft. off the ground and about 15 ft. from my car. the flying saucer disc was about 30 feet in diameter no windows, antennas, props, or jet intake or outtake valves. the saucer was totally silent, i had no radio on, the car is electric and window was down no noises to be heard. underneath at front was a red light which stayed on and 3/4 back underneath was a slow flashing green light. the color of the craft was a dark charcoal gray to dark brownish color mix. this whole experience has totally messed me up a bit. there are a couple fields near by so my first thing to do was to look for someone with a remote control flying a drone at 7am in the morning. but no one was out anywhere and that would have been a really big drone toy to be flying. so for me in my mind i did see a traveler from another world, life does exist out there somewhere. one last thing as it was about to cross over the interstate it took off and was gone in the blink of an eye. i thought to myself if i had my ar-15 with me i might have shot at it to see if i could have brought it down to have more proof of what i was seeing and looking at.
