Dear Op,

As you should be aware, on June 27 we experienced "black Tuesday" and lost all 170 nodes. Our tech support inadvertently sent a great software update to the server which was minus a critical library file. The results were that we long longer could get the nodes to update and talk to the server. To remedy this EVERYBODY had to pull out their memory or SD Cards and send them to Helotes, TX to be reprogrammed and returned. Only a hundred out of 170 nodes have returned their cards and of those 66 are now back online. It will cost you the price of one postage stamp to return your card and within a week or so you'll be back in business.

Unplug your MADAR. Using your thumbnail slide the SD Card out and scotchtape it to a business-card-like piece of card board. Use the attached label and a standard envelope and mail to Helotes, TX. Eric will get your card reprogrammed and back to you in a flash.

Also attached is our latest 201 file on your node. If ANYTHING on the page is incorrect, let ME know by replying to the email.

Thank you for your support.
