Fran,
I had an alert today.
Radiation and the sky camera were all negative.
I did have significant activity on earth movement and infrasound.

Any ideas? I was outside at the time and did not notice anything unusual. Let me know what you think at your convenience.
Thank You.
Mark.

Mark,
Those of you with those pieces of equipment know more than I do, but I am very interested. What do you think the data shows?

fran

How do you measure earth movement and infrasound? What equipment do you use to measure and record? I would like to do that too. If I lived near water I would want a hydrophone. Is there somewhere with information on all the possible sensors and DIY instructions?

Fran and Craig,
Raspberry Shake and Boom. It is made in Panama. It uses sensors connected to a Raspberry Pi computer. I'll find the link and send it to you.

All of the sites are available online also along with their historical records.

I'm currently conducting a study tying meteors to infrasound signatures.

So far it looks promising.

Mark.

Hi Mark,
Your equipment definitely picked up on something going on, this is interesting since your MADAR, Infrasound and Earth Movement we're triggered at the same time. Make a note of this event to see if it repeats again and perhaps we can figure out what it detected.
Thanks for sharing Mark.
